

AXE Equipment The Intimidator

The Intimidator Model is truly intimidating in size and power. Its large 36" x 60" working capacity and 2000 lb weight capacity will accommodate a host of large truck and industrial applications. Standard equipment on the Intimidator features pneumatic door clamps, built in hot tank, manual rollout wheel, and a powerful 15 hp pump motor flowing 225 gallons per minute of hot cleaning solutions for fast and efficient cleaning.

If gas heat is your preference you will like our exclusive state of the art power gas burners. Our power gas burner design puts all the components outside the fire box and away from heat. Components last longer, service is easier and maintenance cost reduced, in addition all sensitive electronics are placed inside a Vapor tight box to eliminate any malfunctions due to moisture.

No need to reach into the spray chamber to pull out the work piece. Our handy rollout wheel feature allows you to simply turn the wheel, driving the work piece out of the spray chamber. It is safe, convenient, and fast

A sturdy footstep and a step assist handle are provided for operator convenience, when loading or unloading, or manual rinsing.

Heavy duty adjustable head rack comes with all the SW-3660 Intimidator models. Includes a large round base and lifting hook for ease of loading and unloading

When cleaning in the spray chamber, the powerful 15 HP Pump agitates hot cleaning solutions through the 24" x 44" x 11" built in hot tank. This feature permits blocks, heads, or small parts to be hot tanked prior to spraywashing at no extra cost.

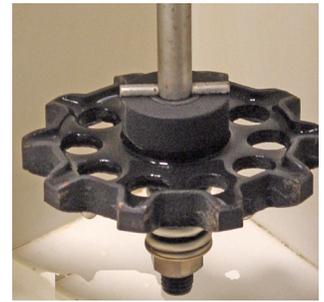

Bullet Proof

Heavy duty electrical components designed to protect your pump motors, electric heaters, gas burners, and turntable drive motors from both short circuits and thermal overloads.

All Axe Equipment water manifolds incorporate Full 360 degree manifold constructed from 2" tubing and designed with radius elbows for high performance water flow. The SW-3660 uses a powerful 15 hp pump pushing 225 gpm at 80 psi through 27 perfectly placed nozzles for fast and efficient cleaning. (Model SW-2832 shown)

Gear driven turntable with spring loaded safety clutch guarantees consistent turntable rotation within the spray chamber for a complete cleaning job.

Heat is very important in the cleaning process and that is why every AXE Equipment washer is outfitted with a digital temperature controller for controlling and monitoring the heat process in the tank.
